Introduction

Thank you for purchasing this Eighth Nerve product. Ours are the most innovative acoustic products available, utilizing proprietary and patent pending design features never before available. To learn more about our designs and why these products work so effectively, please visit our website at www.eighthnerve.com.

Please read this installation guide completely before taking any further steps. The location where you install these products has everything to do with their performance, so please review the suggested placement diagrams or contact us for more specific information if you feel your room differs from the examples provided.

Packing List

Please take a moment to make sure that all the required parts are included. If you are missing any parts, please call your dealer to request replacements.

Eighth Nerve Rectangle

- 1 x Eighth Nerve Rectangle
- 1 x Installation Guide
- 2 x Acrylic Corner Mounts
- 2 x Acrylic Offset Mounts
- 2 x White Thumb Screws
- 2 x Black Thumb Screws
- 4 x Drywall Screws

You will need a Phillips-head screwdriver for installation.

Vertical Installation

1. Measure 24 inches from the floor. Make a second mark 48 inches above the first one.

2. Affix the mount to the wall with the drywall screws so that its inner edge lines up with the mark. See photos on right.

Vertical Installation (continued)

3. Hold the panel with the thumb screw hole in line with the top mount. (1st picture) Screw in the top thumbscrew until snug, and while still holding the panel, line up and insert the bottom thumbscrew. (2nd picture) Do not let go of the panel until BOTH thumbscrews are affixed. One mount is not designed to support the weight of the entire panel.

Vertical Installation (continued)

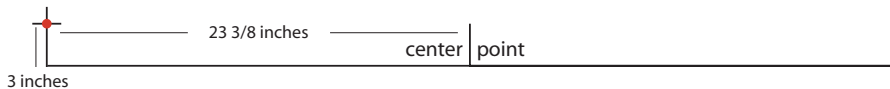

4. Hold both sides of the panel and twist until each side is the same distance from the wall. About a finger's width is ideal.
5. Tighten thumb screws and enjoy!

Horizontal Installation

1. Find the center point for your intended placement and make a mark. Make marks on the ceiling $23 \frac{3}{8}$ inches to the right and to the left of the center point.

2. Along each ceiling mark measure 3 inches into the room from the wall surface and make a perpendicular mark. This intersection will be where your drywall screw is to be placed; denoted by a red dot below.

Horizontal Installation (continued)

3. Affix the mount to the ceiling using the drywall screw. The drywall screw should be screwed in at the intersection of the two lines created in the last step.

4. Hold the panel with the thumb screw hole in line with one of the mounts. Screw in the thumbscrew until snug, and while still holding the panel, line up and insert the other thumbscrew. Do not let go of the panel until BOTH thumbscrews are affixed. One mount is not designed to support the weight of the entire panel.

Horizontal Installation (continued)

5. Hold both sides of the panel and twist until each side is the same distance from the wall. About a finger's width is ideal.
6. Tighten thumb screws and enjoy!

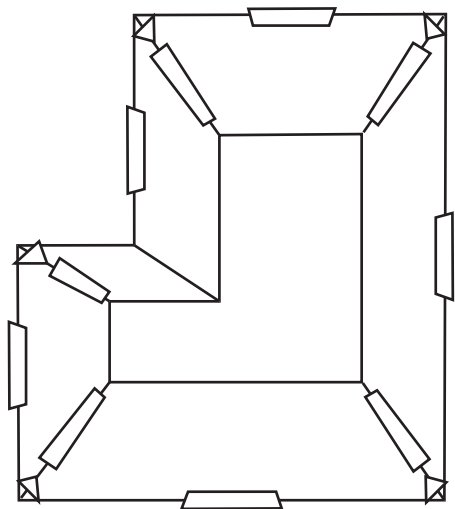

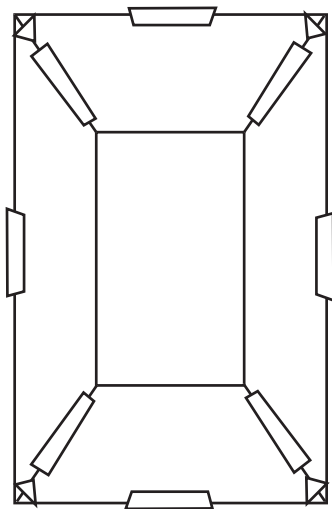

Guarantee

Eighth Nerve products are guaranteed to improve your sound, or we will refund your money less shipping within 30 days of purchase.

Terms

To qualify for our guarantee, you must discuss your setup and placement of the products with an Eighth Nerve representative. Due to the importance of the location of the products in your room, you may be asked to relocate them to areas that would make the product more effective. If you have placed the products where recommended and you are still not satisfied, Eighth Nerve will issue you an RMA number and you can ship your products back to Eighth Nerve in sellable condition for a full refund of the product price.
